

Eniram Shortlisted for the 2010 Seatrade Awards

Eniram onboard system gains wider acceptance for environmental achievements

Helsinki, Finland – March 15, 2010 – Eniram Ltd., provider of dynamic decision support systems for the shipping industry, has been shortlisted for the 2010 Seatrade Awards with the Dynamic Trimming Assistant (DTA) product.

DTA is an onboard system for dynamically monitoring and optimizing the vessel trim – where even small adjustments in the trim will have a substantial impact on vessel performance, resulting in lower fuel consumption and dramatically reduced emissions.

Traditionally, identifying optimal trim is complicated by factors such as speed, draft, depth and internal weight alterations. DTA collects prevailing trim, propulsion power and vessel movement data and with multidimensional analysis incorporates information on current conditions – such as weather and speed – to calculate and display the optimum trim. Optimum trim is then presented in an intuitive graphical user interface, guiding the crew to make appropriate ballast adjustments.

The Seatrade Awards is one of the longest running maritime award schemes and recognize those who have made outstanding contributions over the last year for safe, efficient and environmentally friendly shipping.

Eniram are shortlisted in the 'Protection of the Marine and Atmospheric Environment' category. The final winner in each category will be selected by the judges in London on Monday 24 May 2010.

“We are delighted with this news”, said **Philip Padfield**, CEO, Eniram Group. “We have been working towards environmentally friendlier seafaring for several years. By utilizing DTA many of our customers are saving over 1000 tons of fuel and 3000 tons of carbon emissions per year, and all of our customers combined are saving well over a hundred thousand tons per year. This nomination shows that our approach is really addressing the big issues in the industry today, and in the future.”

Eniram's decision support systems are designed by a team of marine system experts, software architects, programmers, naval architects and captains creating a unique combination of expertise. The Finland-based Eniram has established subsidiaries in Fort Lauderdale, Florida and London.

Eniram will demonstrate the Dynamic Trimming Assistant at Seatrade Cruise Shipping Miami 2010 in Miami, Florida on stand 2357 during 15 - 18 March 2010.

About Eniram

Eniram provides the maritime industry with novel decision support systems to reduce fuel consumption and emissions as well as to support decision making with information analytics. Eniram solutions range from single onboard applications to comprehensive fleet analysis. Eniram has accumulated extensive knowledge from the shipbuilding industry, seafarers and software specialists. Eniram has created a product portfolio to truly assist the shipping industry by providing tools for the crew and naval operations to enhance vessel performance and operations. Eniram solutions enable the industry to deal with the challenge of getting the right information to the right place in real time. Based on Eniram's Vessel Management Platform, the company offers solutions in the areas of Performance improvement, Environmental savings and Information intelligence.
